
The Labor Federation

English daily since 1769

Tuesday 14th May

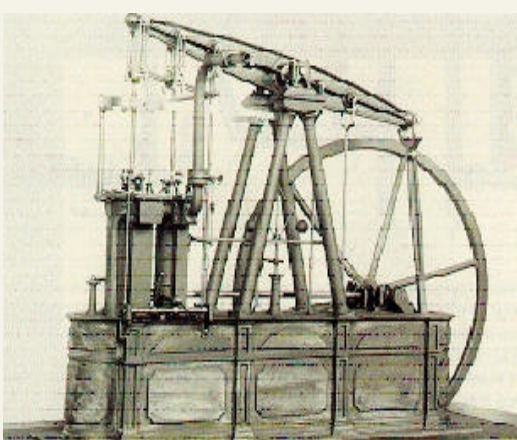

James Watt, the inventor of the year

James Watt, owner of the most important textile industry of Great Britain, has become in one of the most influential person of this century. Last Monday he presented an invent that without a doubt will revolutionize the industry. James has invented a machine that work with coal and can realise works like the workers do. After adapt the machine to the industry, he hope increase the number of machines. This will suppose a reduction of the number of workers. Apparently, this type of empresarials proyects would produce many economic profits to the owner. He save time, he reduce the number of workers, and the expenses are dwindling. In that way he can reduce the prices and he will be much competitive.

The workers have started to mobilise because many of them will lose their work. In fact the work force has already been reduced in a 10%. Because of this ,the workers that have been sack, have burnt properties of their boss James. The guilties of this damage have been incarcerated. It seems like the protests have only started.

So if the number of sack increase the situation will became more radical.

James hope that with this miraculous invention he become into one of the most important and rich person of the planet.

Another case

Yesterday a group of 10 workers went to the textile factory and they stole a big quantity of industrial material and some expensive machinery which was destroyed by them in the camp.

Another home destroyed

The powerful owner of the factory Larry McManagan has burned another house of one of his workers because his worker protested him the low salary and the bad conditions in which he was.

Workers' protest become more violent

The polemic protest of the industrial workers have started to be violent. A industrial worker says that they must make damage because of this way they will not be ignored.
